# WHAT IS HYPOXI

We all have areas of stubborn fat and cellulite that traditional exercise just won't budge. For women, it's typically the stomach, hips, bottom and thighs and for men, it's usually the stomach and love handles. It's difficult to find a weight loss solution that is kind to your body and gets results without having to spend hours at the gym with an already busy schedule.

HYPOXI combines vacuum and compression technology with low impact exercise and healthy nutrition to optimise the body's natural fat burning system in problem areas.

It's scientifically proven to effectively target stubborn fat and dramatically reduce the appearance of cellulite with the average Australian losing 26cm in just 12 sessions.

From as little as 30 minutes, the low impact and low intensity sessions even allow you to work, whilst working out! **HYPOXI IS THE SMART WAY TO SHAPE UP.**
